Can you use metacognition to enhance student learning?

Metacognition describes our ability to assess our own skills, knowledge and learning. [Metacognition](#) affects how well and how long students study. You can enhance student learning with metacognitive strategies that help them to understand and evaluate their own learning style. For more information, consult [Metacognitive skills](#) at <http://www.dllr.state.md.us/gedmd/cs/eslcsmeta.pdf>

Do your students have test anxiety?

When students experience test anxiety, they can experience emotional or physical distress before, during, and after a test event. Physical symptoms include headaches, upset stomach, palpitations, sweaty

How does learning work?

How Learning Works (2010) details seven research-based principles for smart teaching. Can you apply Principle #6?

Students' current level of development interacts with the social, emotional, and intellectual climate of the course to impact learning.

To understand student development, you can explore the [Chickering Model of Student Development](#) to help students

If your students are fidgeting or experience a mental block, they are experiencing test anxiety. You can help students by providing pre-test or creating study groups.</p> <p>More in McKeachie's Teaching Tips: Strategies, Research, and Theory for College and University Teachers.</p> <p>Download the 2013-2014 New Faculty Checklist.</p>	<p>develop competence, autonomy, purpose, integrity and establish identity. To understand intellectual development, you can need to move students from duality, to multiplicity. Consult Perry's Theory of Intellectual and Ethical Development.</p>
